- Reception Areas
- Conference Rooms
- Interior and Exterior Signs
- Building Facades
- Landscaping
- Sculptures
- Water Fountains
- Theatres

The list goes on and on...

Software and Electronic Development

Architectural LED Technology

'LightMaster's clever RGB LED software harnesses the brightness and versatility of red, green and blue RGB LED's to create a myriad of colours — from vibrant and vivid hues to subtle and sensitive pastels.

Displays can feature solid colours or a whole range of shifting shades, programmed to change at the flick of a switch or even according to the time of day or night.

Fading - flicker free - from one colour to any other colour in the palette can be slow and sensuous or fast and furious, demonstrating the power of

RGB LED technology and elegant software working together . . . beautifully.

Use it to create architectural sculptures for dramatic effects.

Programme millions of colours shades into one impressive sign with 'LightMaster' and 'ColourMaster' configuration tools.

For example, sculptures can be lit, colours can be changed or animated depending on the weather conditions. Display your corporate colours with LED Technology.
